

## Drill Boxes

## DRILL BOXES

History has shown us that many of our panel customers, struggle to achieve production levels with standard straight drilling boxes, due to the number of passes required.

This led us to develop a CadCam operation to turn the customers panel drawings into complex multi-spindle drilling boxes, to enable even the most difficult of panels to be drilled in one pass.

The obvious benefits of this are increased production, with a faster through flow of material, freeing up factory space and reducing spoilage.

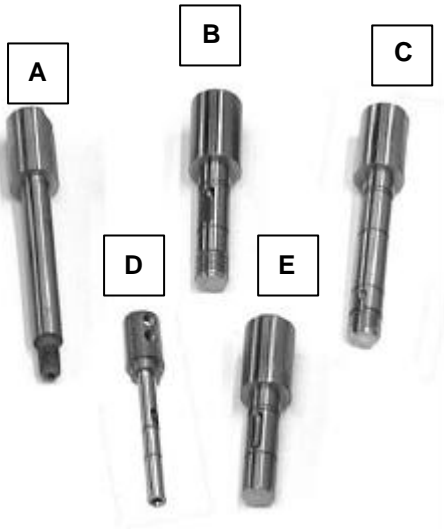

We can manufacture drill boxes to fit a wide range of multi-boring machines and offer a full service and repair facility.

Multi-spindle drilling boxes are used in a variety of industries from panel production, furniture manufacture, aerospace and the automotive industry.
